AMA : Definitions

These are the 4 keys of perspective. Connecting Mantra Sound with Genesis and the nature of Cosmic Time.

(MK) Mantra Key is the code of the Sound analysis using the alpha-numeric chart of Pythagoras who labeled each letter according to its order of occurrence in the 26 letters of the english alphabet. This is the combination of the first Name only and the Mantra: persona vibrational triad of the first calling or active name.

This is in contrast with Pythagoras' system of using the full name. AMA protocol states that the call name is of utmost importance in terms of perspective. The Cornerstone letter is the aptitude based on the active name initial or the face letter of the first name.

Persona Calling or Dream number is the sum of the consonants' strong effect on the conscious level of the psyche. What one must become answering the Maxim What am I To become?

Persona Urge number is the sum of the vowel's soft effect on the subconscious level of the psyche. This is revealed in private and considered a latent persona of What one must become answering the Maxim What am I To become?

Persona Niche number is the sum of all letters and reflects the public and private influence seen as position Answering Who am I? maxim

MGKID is the Mantra-genesis key identifier code. It's also called the moniker given to learning seekers new to pangaea. Cornerstone letter and the Path of Life number. ie D8. Where D is a measure of one's aptitude. And path of or Life or Life Span 8, is the soul's teacher of Life experience.

CSKID is the Cornerstone key Identifier code. It's also called the Vibrational Triad key. It's a modified version of the moniker and celebrates Life Path and Attitude and what's called the mental psyche connection of Mind Spirit seen as a composite form of life essence.

DSKID is the Destiny key Identifier code. It's a deeper higher purpose awareness code to bring the mind closer to destiny answering the last maxim: what am I to become?

A seekers societal role and higher purpose along the Path of Life connecting the CSKID key of the seeker to pull the mind psyche towards this future even though the future is what you make of it.

Mayan Astrology tends to be the most mysterious from the very beginning. Like the Indian, China and other civilizations who have their own astrology in the same way the Mayans too had their own astrology. But the Mayan astrology was very much different from any other astrological tradition. Before we have a clear concept about the Mayan astrology it is very important to know about the Mayan civilization. The Mayan civilization also thrived around thousands of years ago and among any other civilization they were the most advanced civilization.

The Mayan people had an intense bond between the earth and heaven. In the Mayan culture there were also very good astronomers who could predict eclipses and other celestial events accurately as they used to notice all the signs that were given by nature. Their astronomical predictions were extremely accurate. The astronomers of the Maya very well understood the concept of time and invented the Mayan Calendar. The Mayan Calendar was also known as the Tzolkin and it consisted of 20 day signs and 13 galactic numbers which gave a 260 day period calendar. Later the Tzolkin was combined with a 365-day vague solar year which is known as the Haab. The Mayan Haab was mainly the Maya solar calendar which was made up of eighteen months of twenty days each plus a period of five days. The Mayans used to believe that one cycle ends and the new life cycle begins. With the concept of repeating cycles the Mayans introduced 19 zodiac signs. The Mayans kept the indigenous names of the zodiac sign according to the different planet, nature and animal but the Mayan zodiac sign has their source from the Mayan culture, weather, the four directions, and Mayan astronomy. At present in Mayan astrology there are 20 day signs with 13 galactic numbers and 19 zodiac signs.
